

PU TACTILE

Tactile Paving is a system of texturing the floor ground surface to assist pedestrians who are visually impaired to complete their journey with ease and confidence.

These tiles provide guidance and help convey important information such as clues, directions or warnings. The raised surfaces and markers on these tiles can be detected by canes. The Self Adhesive PU Tactile is a relatively new and unique concept in India, developed to overcome the excessive costs of installing traditional ceramic tiles. These can be easily installed on any type of existing surface in no time, by peel-and-bond technology.

These tiles are ideal for creating a barrier-free environment. By providing visual and tactile contrast, guide paths form a vast web of interconnected points of interest, enabling easy navigation.

Dimensions: PU Tactile tile is manufactured in a standard size of 300x300mm with a square edge to ensure tight
